

ARTWORK INSTRUCTIONS

IMAGE

For optimal print outcomes, please provide source files of sufficient quality. SignZilla prefers vector files (EPS, AI, PDF, SVG) or images with a minimum 150 DPI resolution (FINAL SIZE).

COLOR

Please save final art files in CMYK color mode. If you must use PANTONE color mode, please provide precise color values with your art file submission.

BLEED

Ensure that final files have sufficient bleed margins. SignZilla suggests a 2" bleed on all sides.

TEXT

Convert text content to curves/shapes, so there is no concern about computer-specific font availability. Small text sizes (6-point or smaller) may print correctly but are often difficult to read at longer distances.

LINKS

Include all necessary URLs as links and send link specifics along with final art files.

QUESTIONS? We are here to help! Email contact@signzilla.com for questions about file types, image resolution, color modes or other graphic design specifics.
